Dyeing Eggs with

discovery center MUSEUM

DIY Egg Dye:

- 1 teaspoon vinegar
- 20 drops food coloring
- 1/2 cup boiling water

Combine in a bowl or cup and stir.

Show us your work! If you make this at home, post a picture of your eggs on social media with #DiscoveryCenterScience

To Make the Example:

1. Wrap a piece of tape (painter's, masking, washi, etc.) around a hard-cooked egg.
2. Dip half the egg in one color dye. The longer you leave the egg in, the brighter/darker the color you'll achieve.
3. Dry the egg. Dip the other half of the egg in another color dye.
4. Let the egg dry.
5. Peel off the tape.
6. Using a non-toxic marker, write your name or a message, or create a design, on the white band left by the tape.
